

臨床兒童心理學

這是研究所一學期的課程。此課程著重於整合發展心理病理學的理論、病因、研究、治療及預防。除了學習嬰幼兒、兒童與青少年常會經歷特定種類的異常行為，此課程也將概觀有關這些問題的衡鑑、治療及可能的預防方式。學生將會有機會以書面報告及課堂討論來表述他們的學習情況。此課程鼓勵學生能藉由評論兒童心理病理的原創研究、應用兒童心理病學的知識到一些兒童期與青少年期行為適應不良的特定個案研究，以發展額外的分析思考能力。指定作業需用英文書寫。

必修課程：變態心理學、兒童心理學或發展心理學。若有學生未修習基本必修課程，需獲得授課老師的同意。

Clinical Child Psychology

This is a graduate level seminar in clinical child psychopathology. The course focuses on the integration of theory, etiology, research, treatment, and prevention of developmental psychopathology. In addition to learning about specific types of abnormal behavior that infants, children, and adolescents experience, the course will also provide an overview of assessment, treatment and possible prevention of these problems. Students will have the opportunity to express their learning in written format, as well as through oral discussions in the classroom. Students will be encouraged to develop additional analytical thinking skills by critically evaluating original research in child psychopathology and by applying their knowledge of child psychopathology to specific case studies of maladaptive behavior in childhood and adolescence. Assignments are to be written in English.

Prerequisite courses: Abnormal psychology, child psychology, or developmental psychology. If any student who does not have the required prerequisite courses, he/she needs to speak to the course professor for approval.
