

# Contents

- 0 Introduction
- I Preliminaries**
- 1 Holomorphic Functions of Many Variables
  - 1.1 Holomorphic functions of one variable
    - 1.1.1 Definition and basic properties
    - 1.1.2 Background on Stokes' formula
    - 1.1.3 Cauchy's formula
  - 1.2 Holomorphic functions of several variables
    - 1.2.1 Cauchy's formula and analyticity
    - 1.2.2 Applications of Cauchy's formula
  - 1.3 The equation  $\frac{\partial g}{\partial \bar{z}} = f$
- Exercises
- 2 Complex Manifolds
  - 2.1 Manifolds and vector bundles
    - 2.1.1 Definitions
    - 2.1.2 The tangent bundle
    - 2.1.3 Complex manifolds
  - 2.2 Integrability of almost complex structures
    - 2.2.1 Tangent bundle of a complex manifold
    - 2.2.2 The Frobenius theorem
    - 2.2.3 The Newlander–Nirenberg theorem
  - 2.3 The operators  $\partial$  and  $\bar{\partial}$ 
    - 2.3.1 Definition
    - 2.3.2 Local exactness
    - 2.3.3 Dolbeault complex of a holomorphic bundle
  - 2.4 Examples of complex manifolds
- Exercises

## 3 Kähler Metrics

### 3.1 Definition and basic properties

#### 3.1.1 Hermitian geometry

#### 3.1.2 Hermitian and Kähler metrics

#### 3.1.3 Basic properties

### 3.2 Characterisations of Kähler metrics

#### 3.2.1 Background on connections

#### 3.2.2 Kähler metrics and connections

### 3.3 Examples of Kähler manifolds

#### 3.3.1 Chern form of line bundles

#### 3.3.2 Fubini–Study metric

#### 3.3.3 Blowups

### Exercises

## 4 Sheaves and Cohomology

### 4.1 Sheaves

#### 4.1.1 Definitions, examples

#### 4.1.2 Stalks, kernels, images

#### 4.1.3 Resolutions

### 4.2 Functors and derived functors

#### 4.2.1 Abelian categories

#### 4.2.2 Injective resolutions

#### 4.2.3 Derived functors

### 4.3 Sheaf cohomology

#### 4.3.1 Acyclic resolutions

#### 4.3.2 The de Rham theorems

#### 4.3.3 Interpretations of the group $H^1$

### Exercises

## II The Hodge Decomposition

## 5 Harmonic Forms and Cohomology

### 5.1 Laplacians

#### 5.1.1 The $L^2$ metric

#### 5.1.2 Formal adjoint operators

#### 5.1.3 Adjoints of the operators $\bar{\partial}$

#### 5.1.4 Laplacians

### 5.2 Elliptic differential operators

#### 5.2.1 Symbols of differential operators

#### 5.2.2 Symbol of the Laplacian

#### 5.2.3 The fundamental theorem

### 5.3 Applications

#### 5.3.1 Cohomology and harmonic forms

### 5.3.2 Duality theorems

#### Exercises

## 6 The Case of Kähler Manifolds

### 6.1 The Hodge decomposition

#### 6.1.1 Kähler identities

#### 6.1.2 Comparison of the Laplacians

#### 6.1.3 Other applications

### 6.2 Lefschetz decomposition

#### 6.2.1 Commutators

#### 6.2.2 Lefschetz decomposition on forms

#### 6.2.3 Lefschetz decomposition on the cohomology

### 6.3 The Hodge index theorem

#### 6.3.1 Other Hermitian identities

#### 6.3.2 The Hodge index theorem

#### Exercises

## 7 Hodge Structures and Polarisation

### 7.1 Definitions, basic properties

#### 7.1.1 Hodge structure

#### 7.1.2 Polarisation

#### 7.1.3 Polarised varieties

### 7.2 Examples

#### 7.2.1 Projective space

#### 7.2.2 Hodge structures of weight 1 and abelian varieties

#### 7.2.3 Hodge structures of weight 2

### 7.3 Functoriality

#### 7.3.1 Morphisms of Hodge structures

#### 7.3.2 The pullback and the Gysin morphism

#### 7.3.3 Hodge structure of a blowup

#### Exercises

## 8 Holomorphic de Rham Complexes and Spectral Sequences

### 8.1 Hypercohomology

#### 8.1.1 Resolutions of complexes

#### 8.1.2 Derived functors

#### 8.1.3 Composed functors

### 8.2 Holomorphic de Rham complexes

#### 8.2.1 Holomorphic de Rham resolutions

#### 8.2.2 The logarithmic case

#### 8.2.3 Cohomology of the logarithmic complex

### 8.3 Filtrations and spectral sequences

#### 8.3.1 Filtered complexes

- 8.3.2 Spectral sequences
- 8.3.3 The Frölicher spectral sequence
- 8.4 Hodge theory of open manifolds
  - 8.4.1 Filtrations on the logarithmic complex
  - 8.4.2 First terms of the spectral sequence
  - 8.4.3 Deligne's theorem

Exercises

### **III Variations of Hodge Structure**

#### 9 Families and Deformations

##### 9.1 Families of manifolds

###### 9.1.1 Trivialisations

###### 9.1.2 The Kodaira–Spencer map

##### 9.2 The Gauss–Manin connection

###### 9.2.1 Local systems and flat connections

###### 9.2.2 The Cartan–Lie formula

##### 9.3 The Kähler case

###### 9.3.1 Semicontinuity theorems

###### 9.3.2 The Hodge numbers are constant

###### 9.3.3 Stability of Kähler manifolds

#### 10 Variations of Hodge Structure

##### 10.1 Period domain and period map

###### 10.1.1 Grassmannians

###### 10.1.2 The period map

###### 10.1.3 The period domain

##### 10.2 Variations of Hodge structure

###### 10.2.1 Hodge bundles

###### 10.2.2 Transversality

###### 10.2.3 Computation of the differential

##### 10.3 Applications

###### 10.3.1 Curves

###### 10.3.2 Calabi–Yau manifolds

Exercises

### **IV Cycles and Cycle Classes**

#### 11 Hodge Classes

##### 11.1 Cycle class

###### 11.1.1 Analytic subsets

###### 11.1.2 Cohomology class

###### 11.1.3 The Kähler case

###### 11.1.4 Other approaches
